## Diisocyanate - Information

Dear Ladies and Gentlemen,

In August 2020, the restriction of diisocyanates was decided by regulation (EU) 2020/1149. The restriction applies to diisocyanates per se, as well as to diisocyanates in mixtures from a concentration of more than 0.1 percent by weight.

From **August 24, 2023**, diisocyanates above 0.1% by weight may only be manufactured, distributed and used if the required training of employees has taken place and is documented. Employers must keep records of the training of their employees. Refresher training is required every five years.

ADLER has therefore decided to **change all hardeners** that contain more than 0.1 percent by weight of diisocyanates. All new hardeners according to the appendix contain less than 0.1 percent by weight of diisocyanates. All other properties of the hardeners, processing and dosing as well as the quality of the finished 2K surface remain unchanged. If you have any questions, please do not hesitate to contact **Mag.(FH) Barbara Leitner (barbara.leitner@adler-lacke.com, DW 415)** or our sales representatives.

Our customers **do not have to complete any official training** to be allowed to use our hardeners after August 24, 2023. ADLER therefore does not offer certified trainings for the use of hardeners containing more than 0.1 percent by weight of diisocyanates.

Yours sincerely

Dr. Wilfrid Jochum

Specialist System Management / Health, Safety and Environmental Protection Management
